

Case Study:- The B. & C. Company Ltd

“As our business requirements have changed over the years, the picking system supplied by Mainway has adapted with us.” - Dan McNeil, The B. & C. Company.

Simplicity and flexibility have allowed The B. & C. Company Ltd to accommodate 3 businesses into the one facility.

Bombay, Bowrings and Bendix have shared distribution operations in the existing Brampton facility.

Non-conveyables are picked to powered pallet trucks while conveyable items are picked from a 2 level pick tower 270 ft long. They are then conveyed through a series of zero-pressure accumulation conveyors at high level before declining to a recirculating manual palletizing loop.
